

Shelter System Flow Data

Amanda Noble, PhD

Context

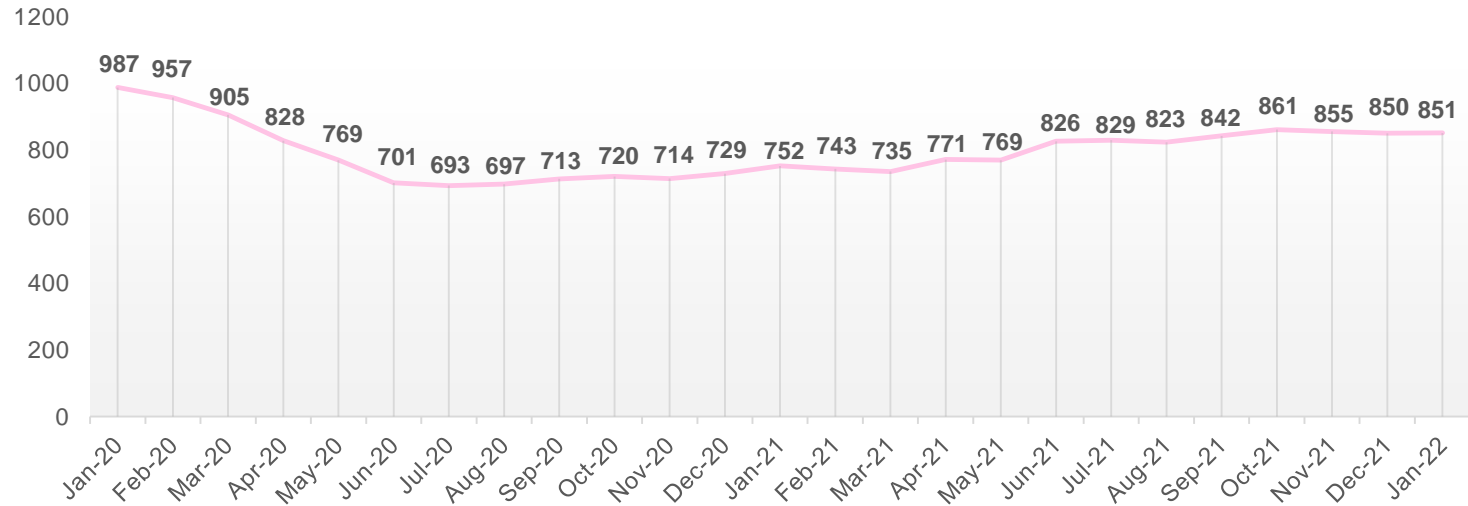

- Data is an attempt to show the flow in and out of system
- Youth represent 9%-10.3% of the population in the dataset

Limitations:

- The majority of 'outflow' from shelter is due to youth not being active in the shelter system in the last 3 months
- Cannot track individual youth through system or aggregate results (e.g. this % of youth returned from housing), or by demographic variables

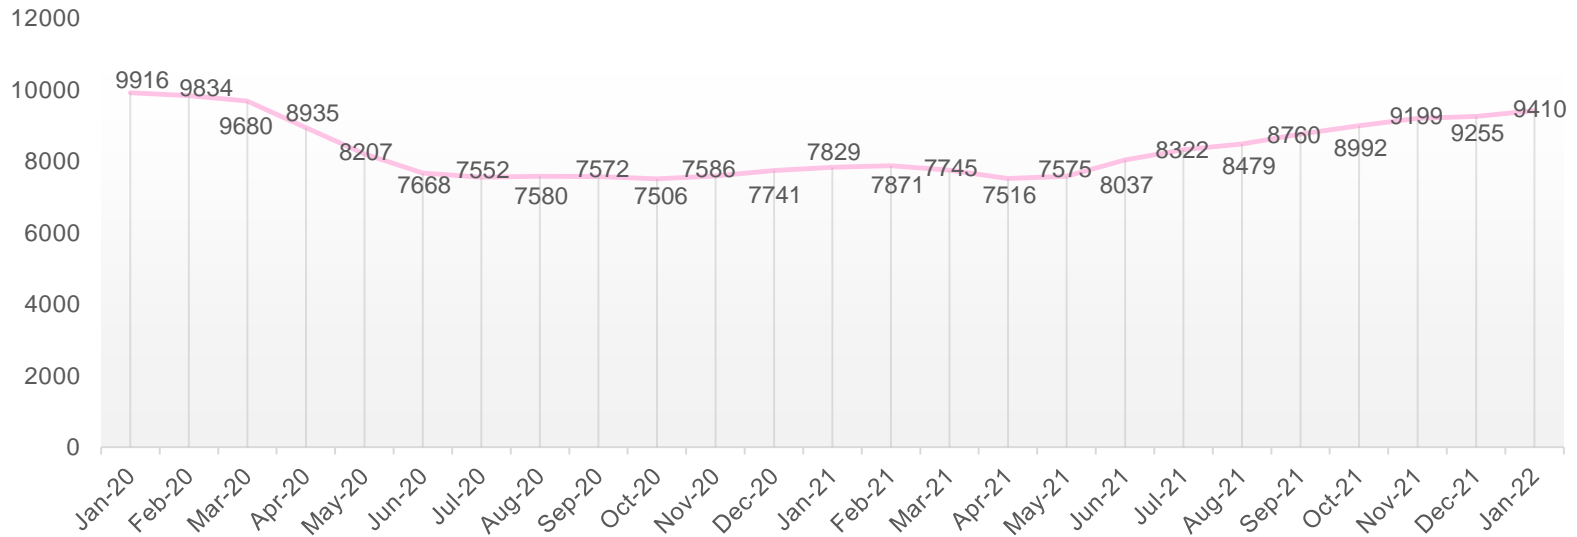

Active Youth

Number of Youth Actively Experiencing Homelessness
January 2020-January 2022

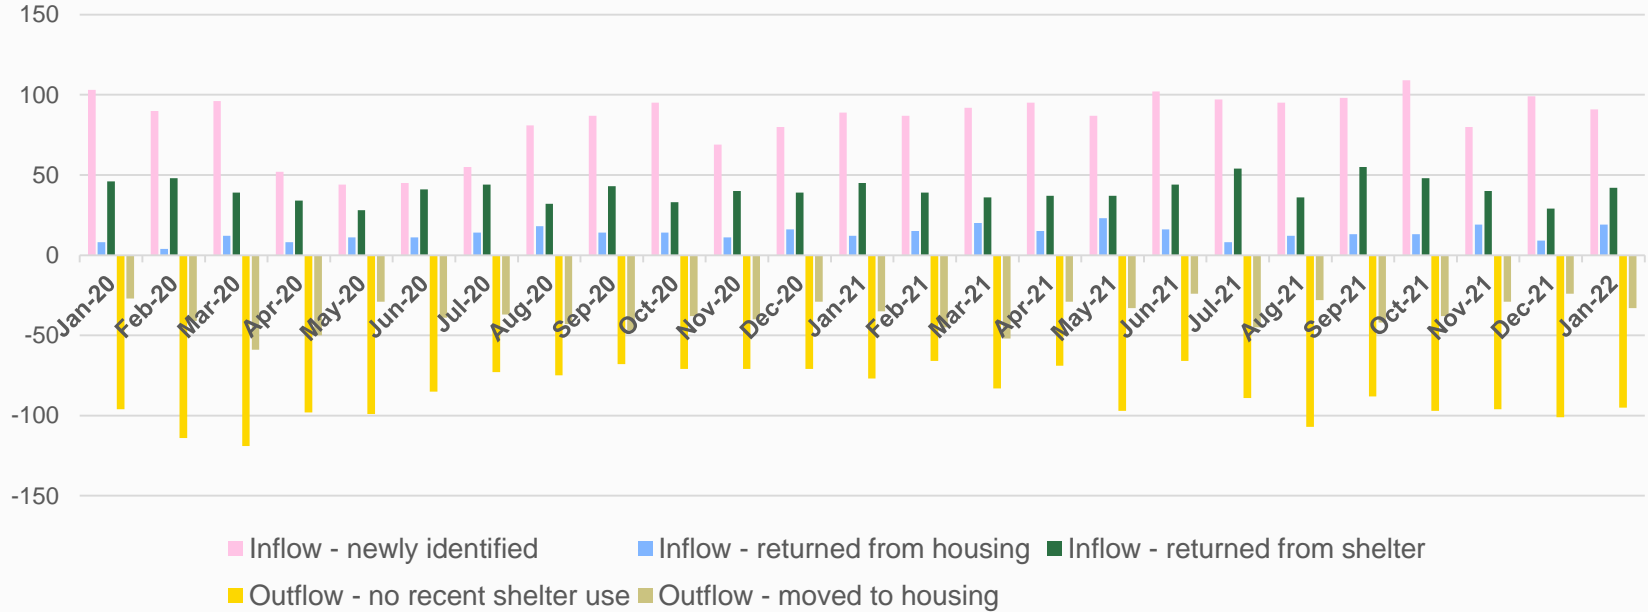

Active – All Population

Number of People Actively Experiencing Homelessness January 2020-
January 2022

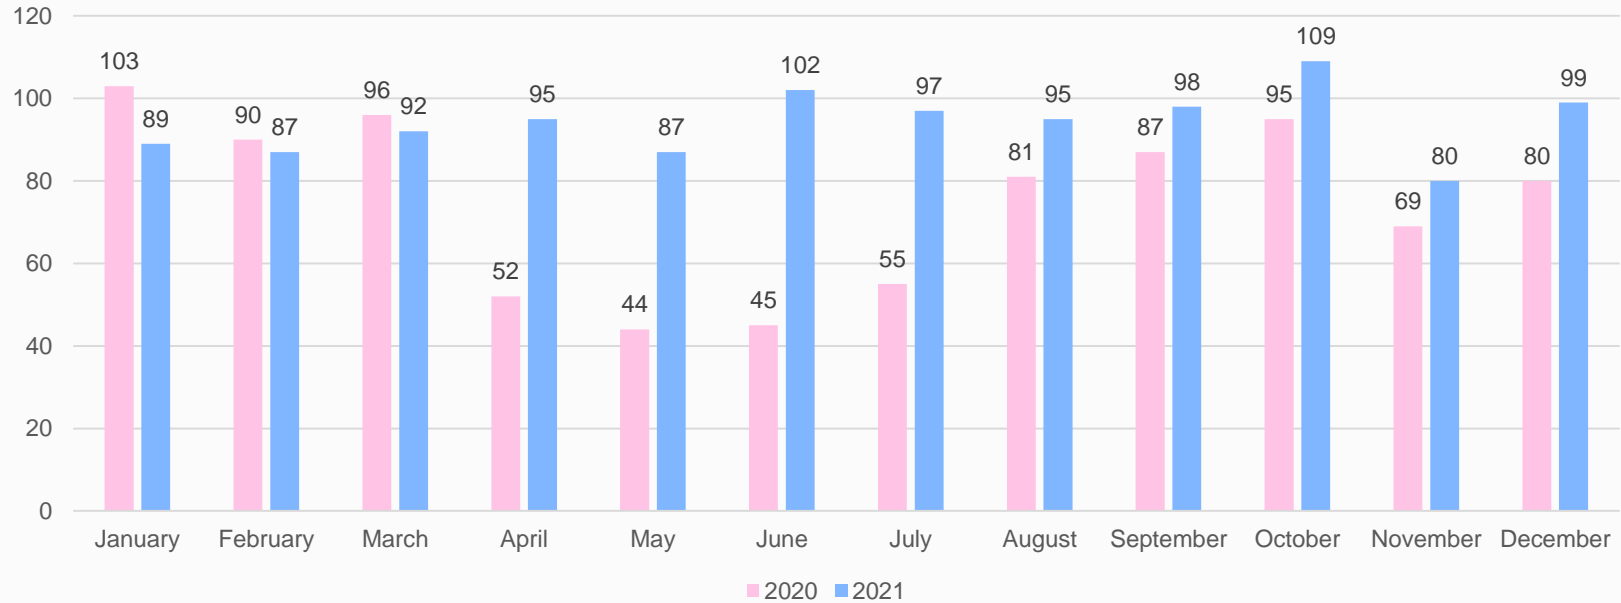

Inflow and Outflow

Inflow and Outflow January 2020-January 2022

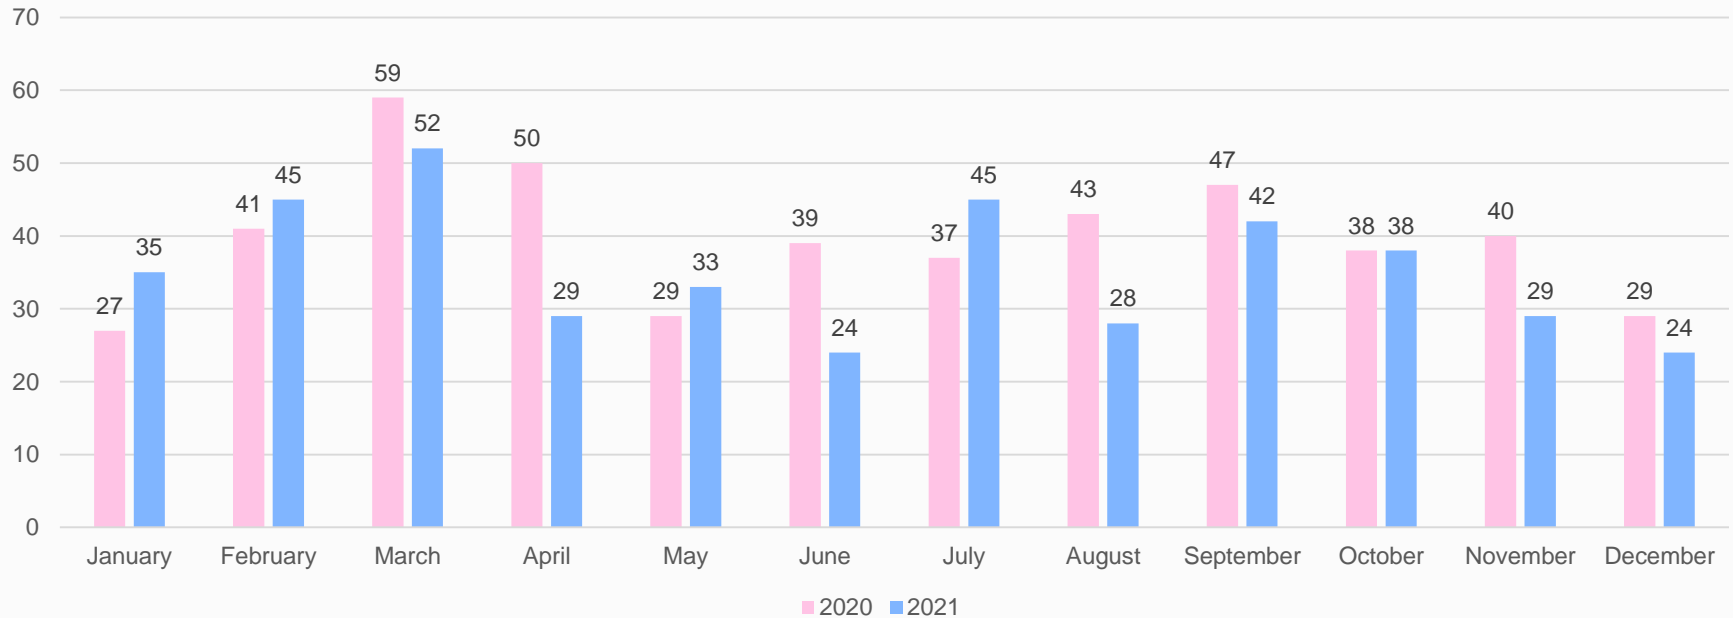

Newly Identified Youth

Newly Identified Youth in 2020 and 2021

Youth Housed

Youth Housed in 2020 and 2021

Returning from Housing Compared to Moved to Housing

Returned from Housing vs. Moved to Housing

Youth Net Change

Net Change Each Month (Inflow Minus Outflow)
